

Downloading and setting up Prism Live Studio

Please follow these instructions before the session on March 10th. This is a required part of the course. We will use the app to edit video at the end of the session.

1. Search for and download the Prism Live Studio app to your device. It's a free app and available for Apple and Android devices.
2. Once the app is downloaded, create an account. I recommend selecting the option at the bottom "Sign up with email." Creating an account through Facebook, Google or any of the other social media options will connect the app to your account on that platform. That may be undesirable to some.
3. Enter an email address then create a username and password.
4. Allow Prism Live to access your camera (if you wish)
5. Allow Prism Live to access the microphone (if you wish)
6. Allow Prism Live to access your photos (required)
7. Allow Prism Live to send you notifications. (Required to remove the watermark from saved videos. It can be changed later in settings if you desire.)
